Client installation guide

Set up DWService on Windows

Install DWAgent on the Windows computer that needs help, then connect it to **Postiqo Support**. Follow the screens in order and click the controls marked with red rings.

Understand the access before you begin
This creates persistent remote support access. While DWAgent is installed, enabled and online, Postiqo Support can remotely view and control this computer and access files. With unattended access enabled, a new approval may not be required for each connection. Closing the installer or browser does not remove access. Continue only if you are authorised to approve this access and agree to it. You can pause or revoke access using the controls on page 13.

Have these ready

An internet connection, permission to install software, and the installation password supplied separately by Postiqo Support.

Use your own name

Name the agent with **YOUR NAME and company**, so support can identify the right computer. Example: **Jane Smith - Acme**.

Follow the sequence

Download on pages 2-4. Install on pages 5-11. Check Online on page 12. Stop or remove access on page 13.

Screens show the official DWService website, official Windows documentation and a real client Downloads folder. Labels may vary by version. Original numbered arrows are retained in the documentation images. Follow this guide's step headings.

Download the Windows agent

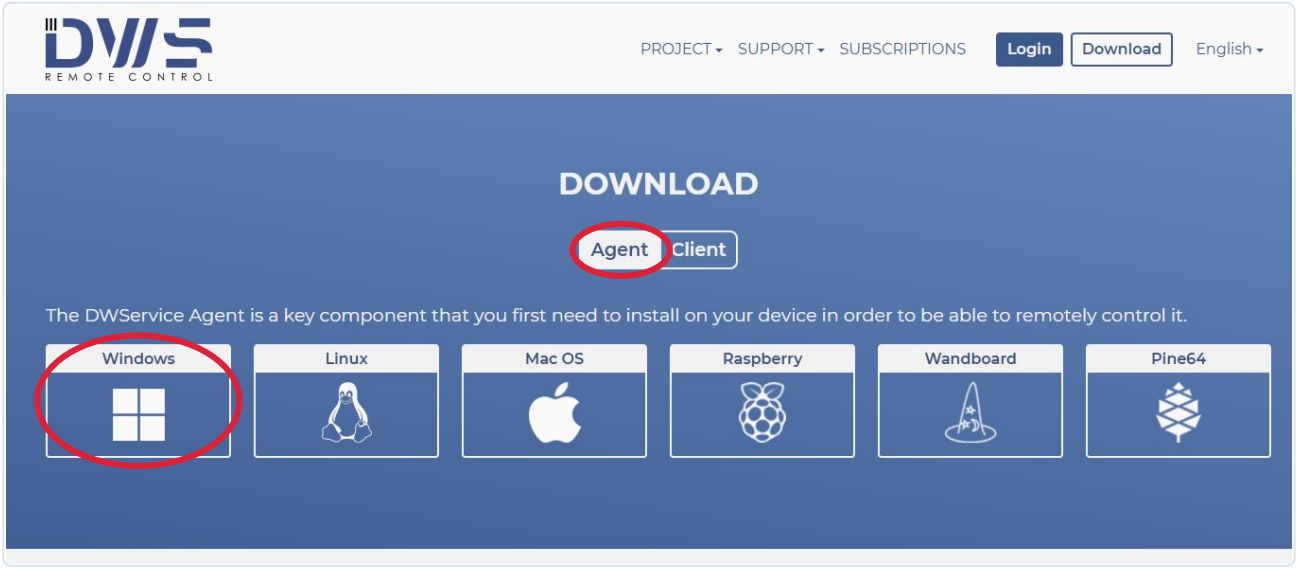

1 Open the official download page

On this computer, open:
www.dwservice.net/en/download.html

Select the **Agent** tab.

Click the **Windows** tile shown in the red ring.

Use the official DWService website. You do not need to create a personal DWService account for this Postiqo setup.

Official website: dwservice.net/en/download.html. Saved website screenshot.

Download the Windows agent

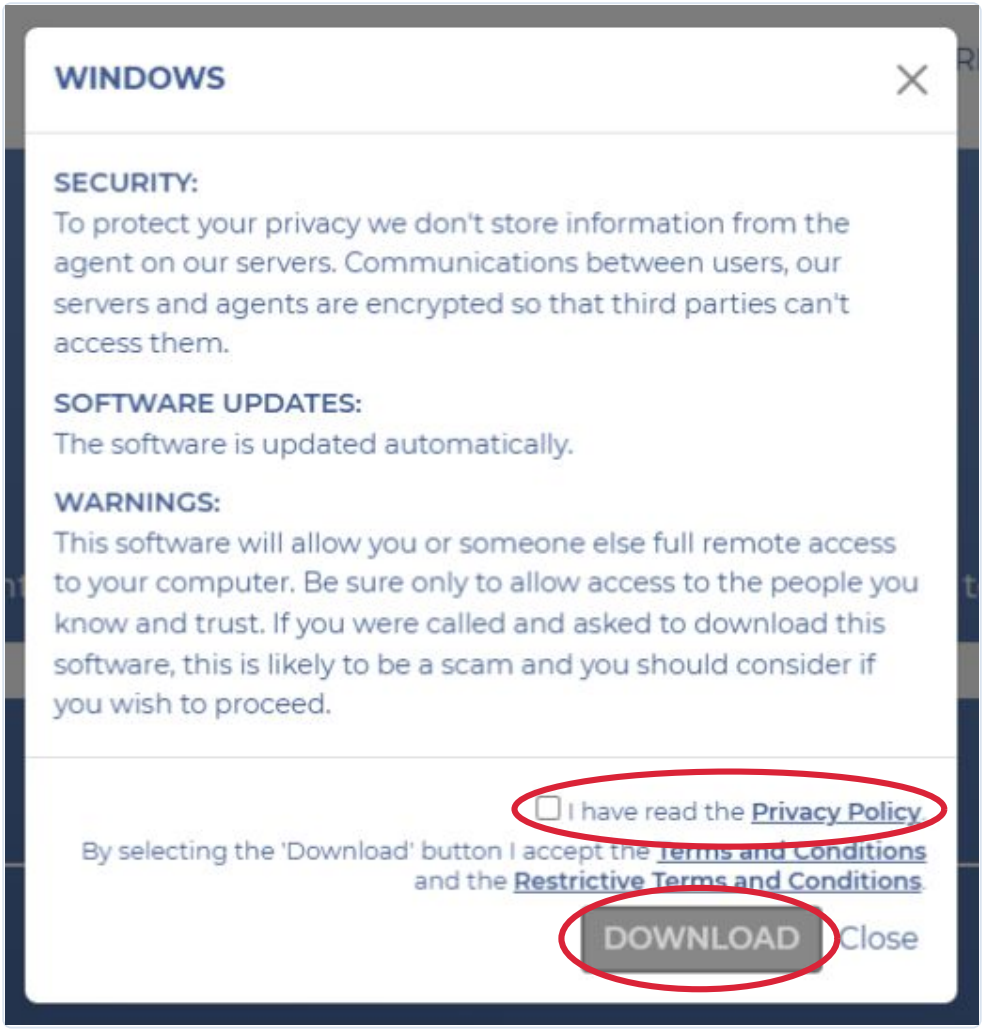

2 Review the notice and download

Read the security and remote access notice.

Read the **Privacy Policy**, then tick **I have read the Privacy Policy** if you agree.

Review the terms, then click **Download** to accept them and save the installer.

> Wait for the download to finish before continuing. The file is normally called **dwagent.exe**.

Official website download notice. Cropped from the saved website screenshot.

Open the downloaded file

3 Find and open dwagent.exe

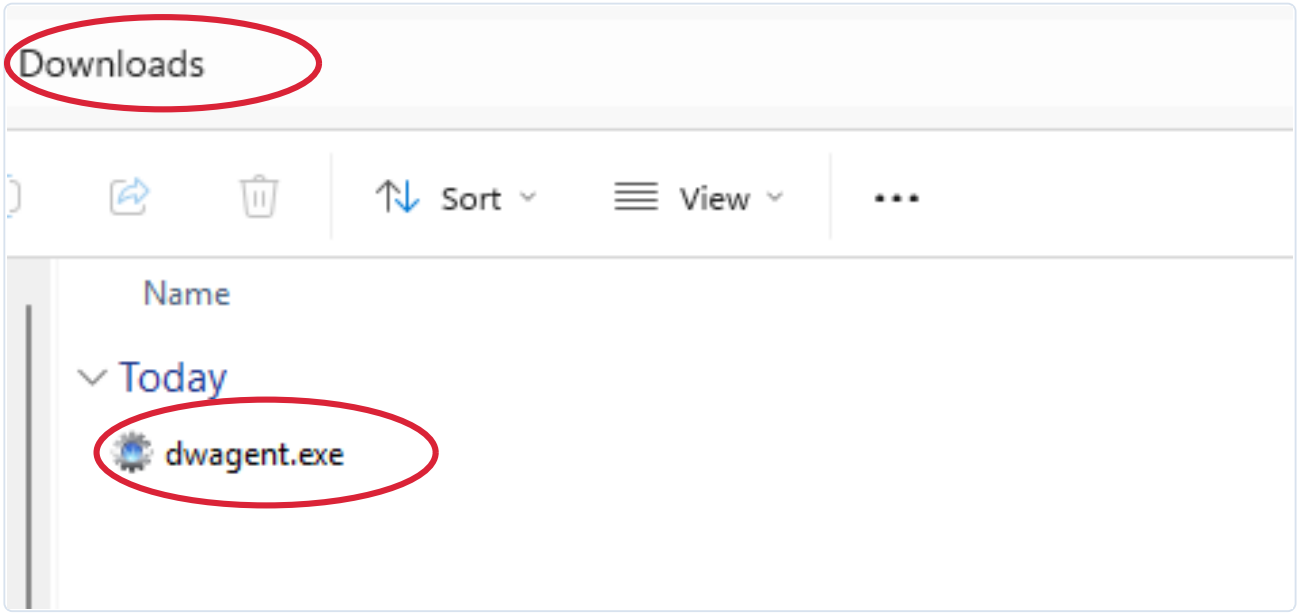

3.1 Press **Windows + E** to open File Explorer.

3.2 Open **Downloads** in the left sidebar, or the folder you chose when saving. Check the folder name at the top.

3.3 Find **dwagent.exe**. Windows may show it as **dwagent** if file extensions are hidden.

3.4 Double-click **dwagent.exe** to start the installer.

If needed, press **Ctrl + J** in your browser to open its downloads list, then choose **Show in folder** for **dwagent.exe**.

Real Windows screenshot supplied by the client. Cropped to show Downloads and dwagent.exe.

Install DWAgent

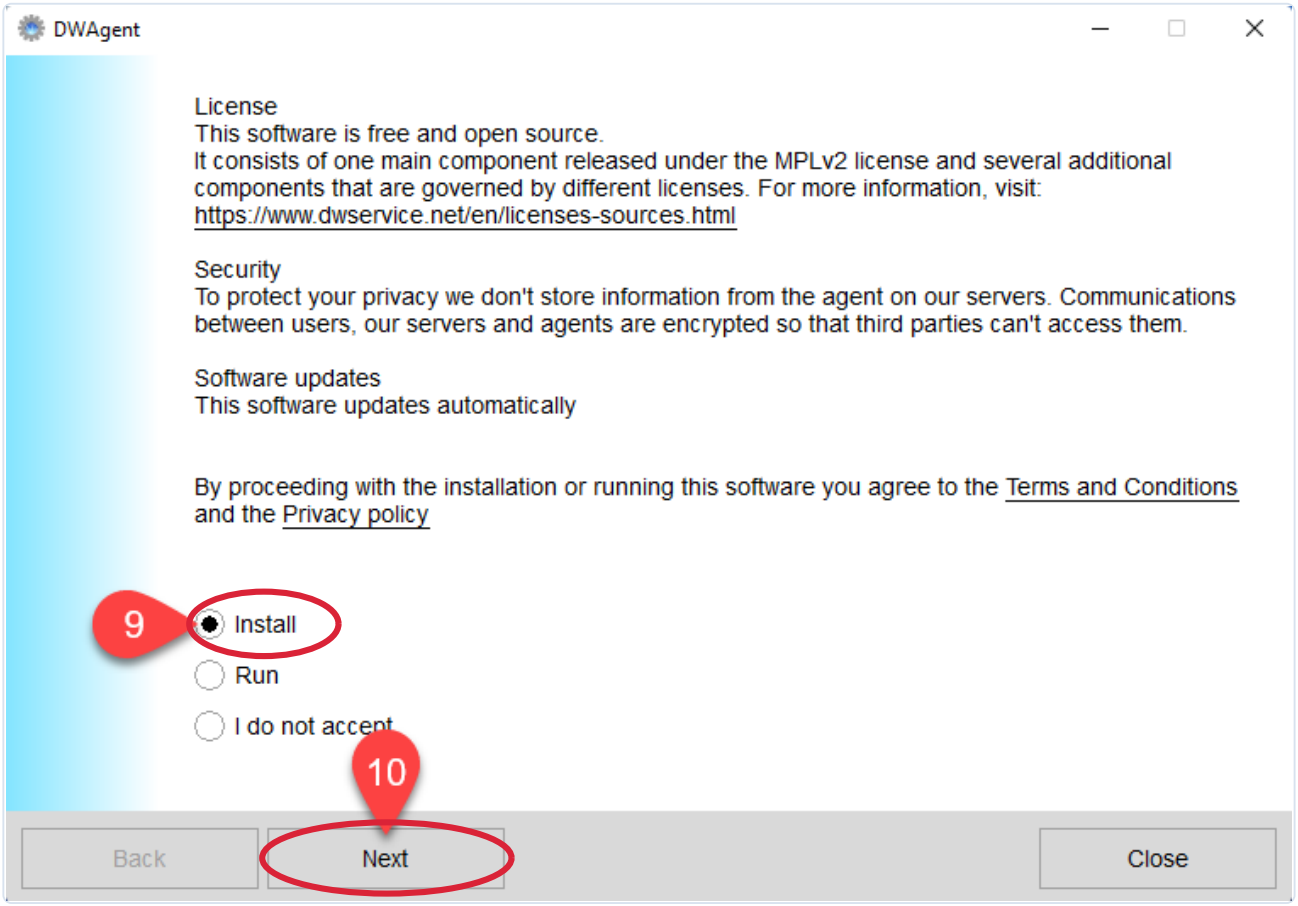

4 Review the licence and choose Install

Read the licence, terms and privacy information in the installer.

If you agree, select **Install**.

Click **Next**.

Install keeps DWAgent on this computer for ongoing support. Choose this option only after reviewing the access explanation on page 1.

Install DWAgent

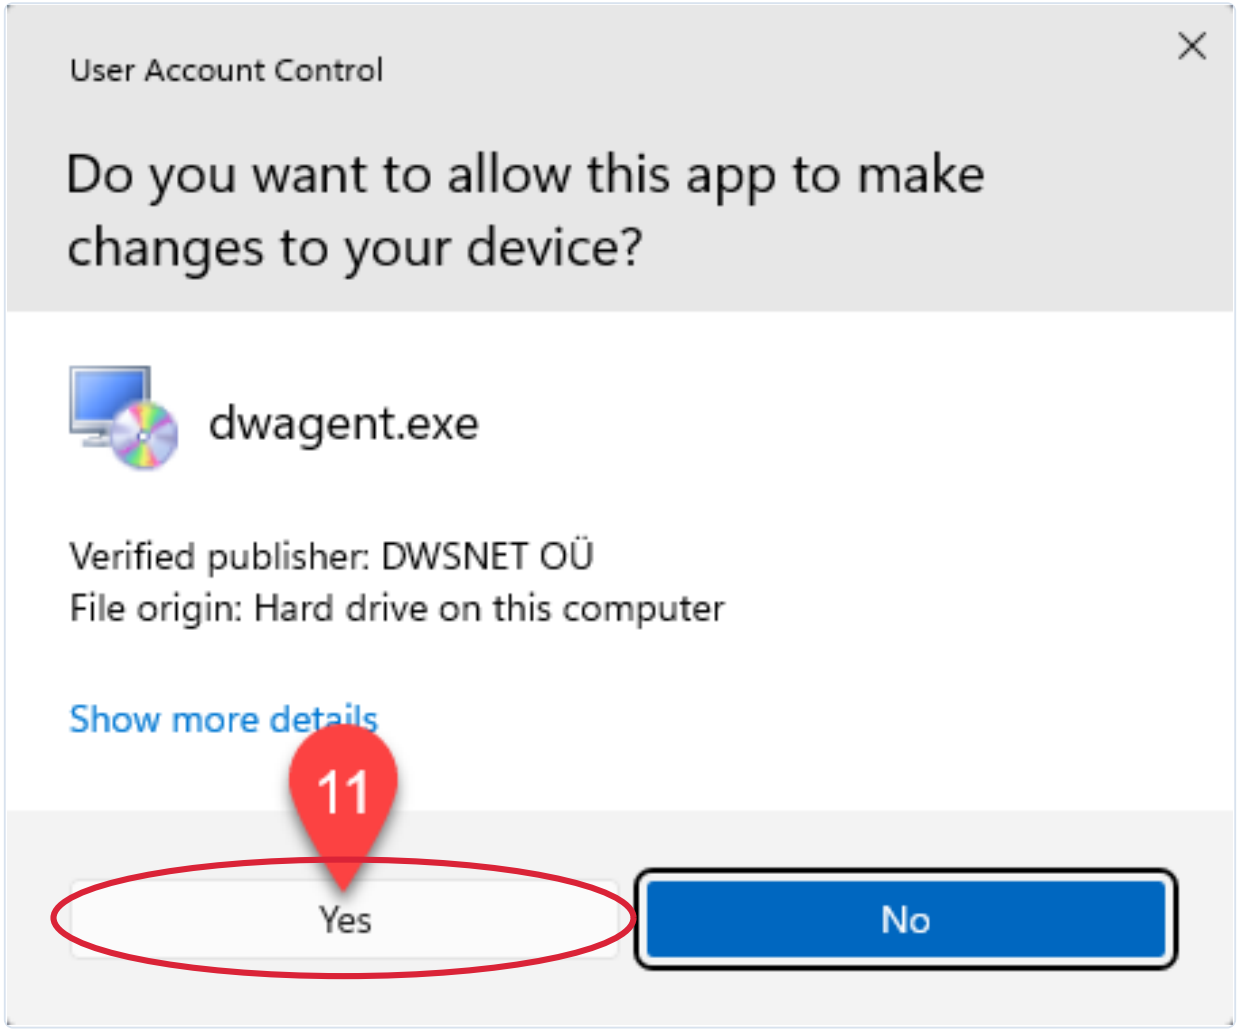

5 Allow the Windows installation

Windows may ask whether **dwagent.exe** can make changes to your device.

For the installer you just downloaded from the official site, click **Yes**.

If Windows asks for administrator credentials, ask your administrator to help.

This permission screen may appear at a different point, or may not appear on your computer.

Source: official DWService Windows guide. Publisher text may vary by version.

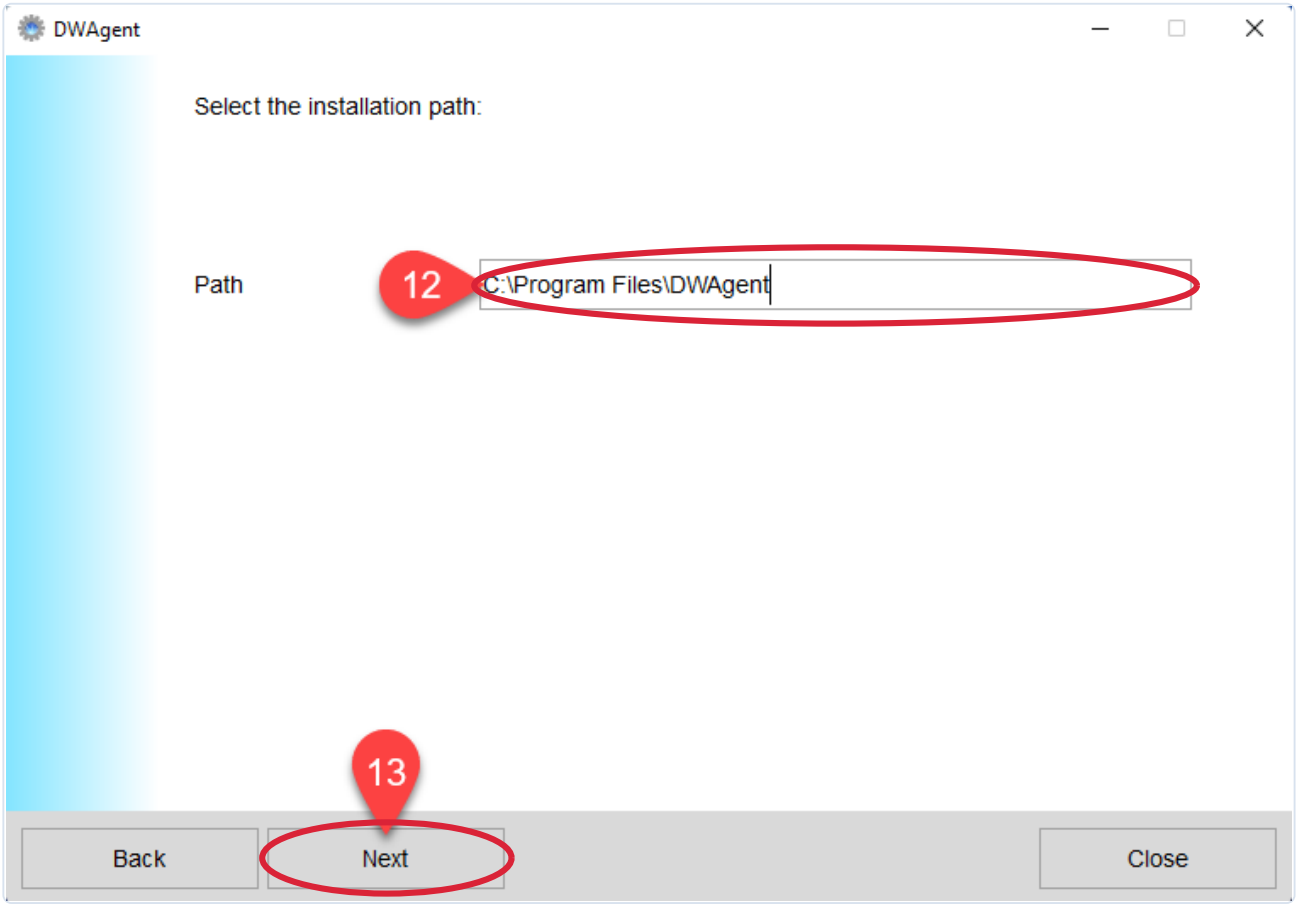

Install DWAgent

6 Keep the installation folder

Keep the default **Path**:
C:\Program Files\DWAgent

Click **Next**.

Change the folder only if your administrator or Postiqo Support tells you to.

Source: official DWService Windows guide. Original arrows retained.

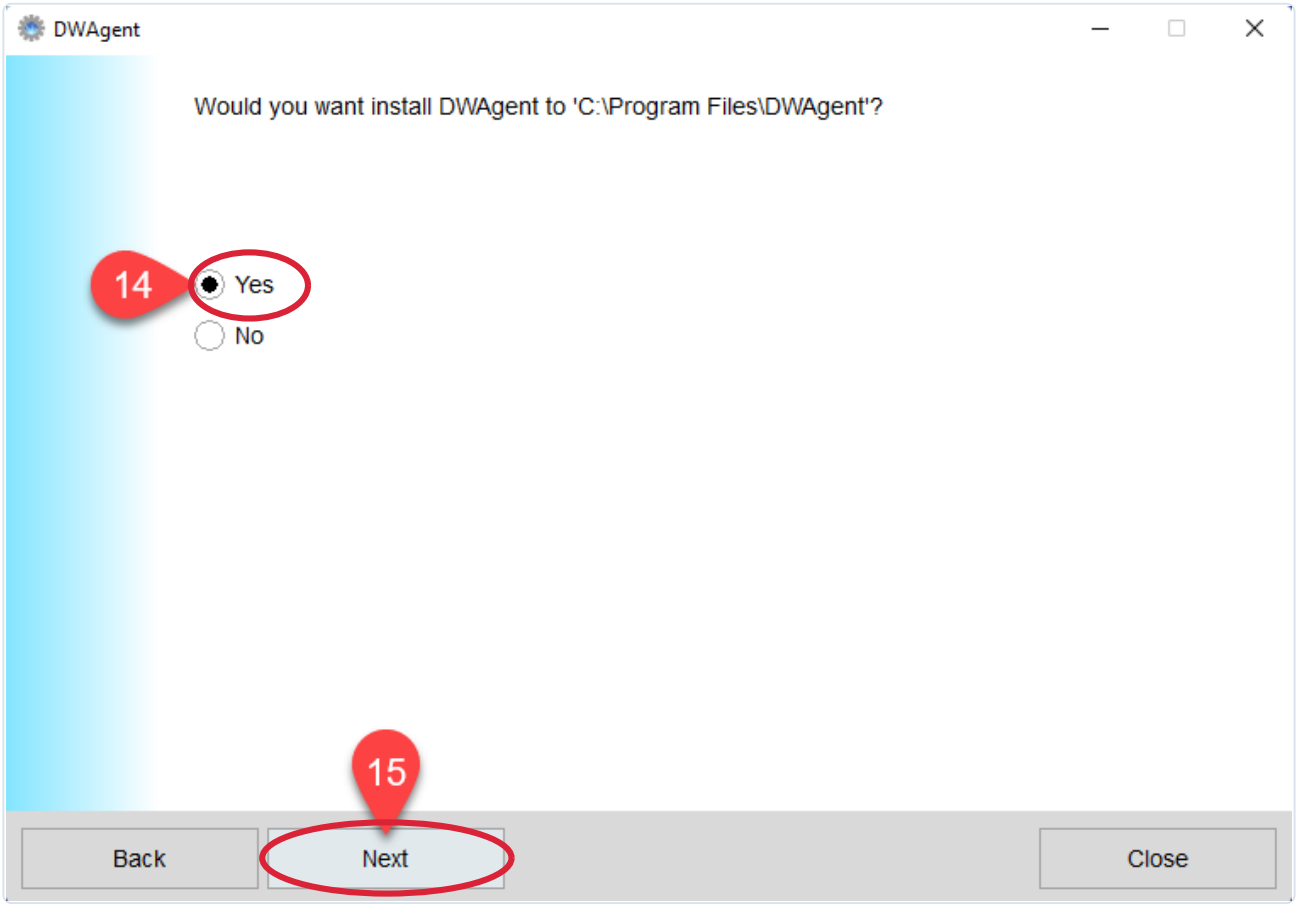

Install DWAgent

7 Confirm the folder and continue

Check that the destination is the folder shown on the previous screen.

Select **Yes**.

Click **Next** and wait while the installer continues.

Source: official DWService Windows guide. Original arrows retained.

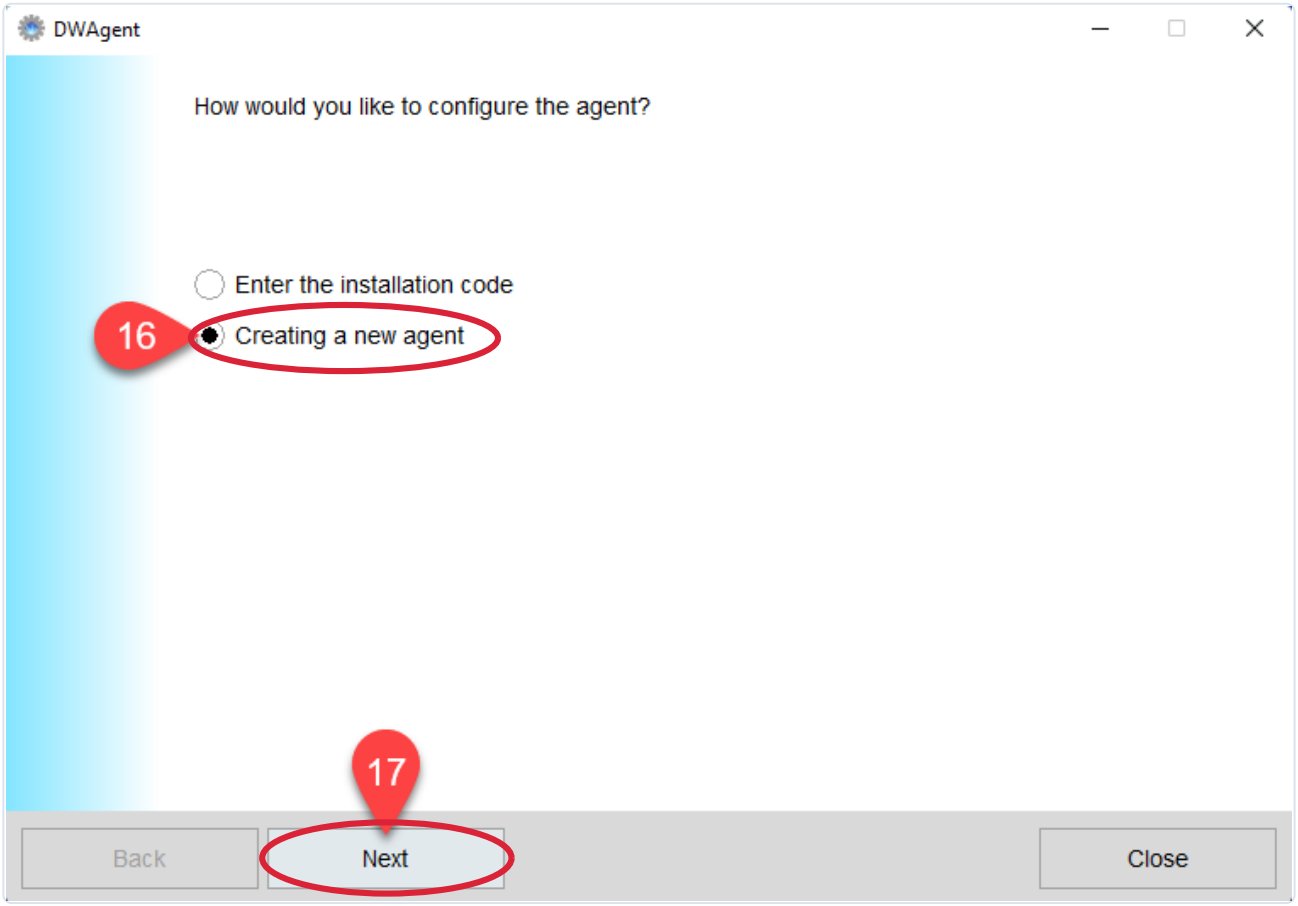

Connect the computer to Postiqo Support

8 Create a new agent

Select **Creating a new agent**.
Some versions may say **Create a new agent**.

Click **Next**.

This connects the computer using the support account details on the next page. An installation code is not used for this method.

Source: official DWService Windows guide. Original arrows retained.

Connect the computer to Postiqo Support

9 Enter the support details and your name

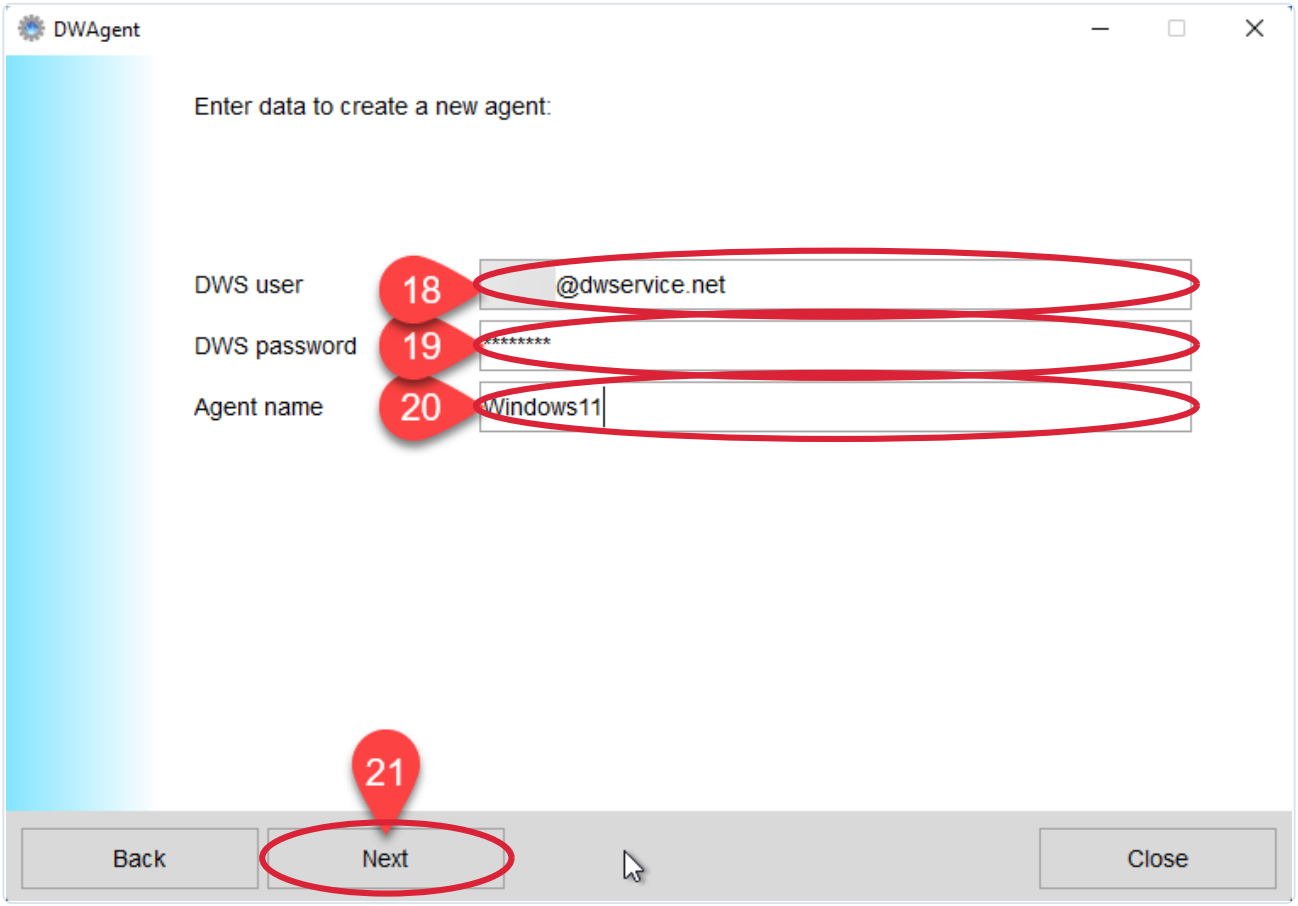

User / DWS user
support@postiqo.io

Installation password / DWS password
Enter the installation password provided by Postiqo Support

Agent name
YOUR NAME and company
Example: Jane Smith - Acme

Check all three fields, then click **Next**.

The screenshot contains example values. Enter the details at left. The installation password is supplied separately; no actual password is included in this guide.

Official example screen. Use support@postiqo.io and your own name; do not copy its examples.

Finish the installation

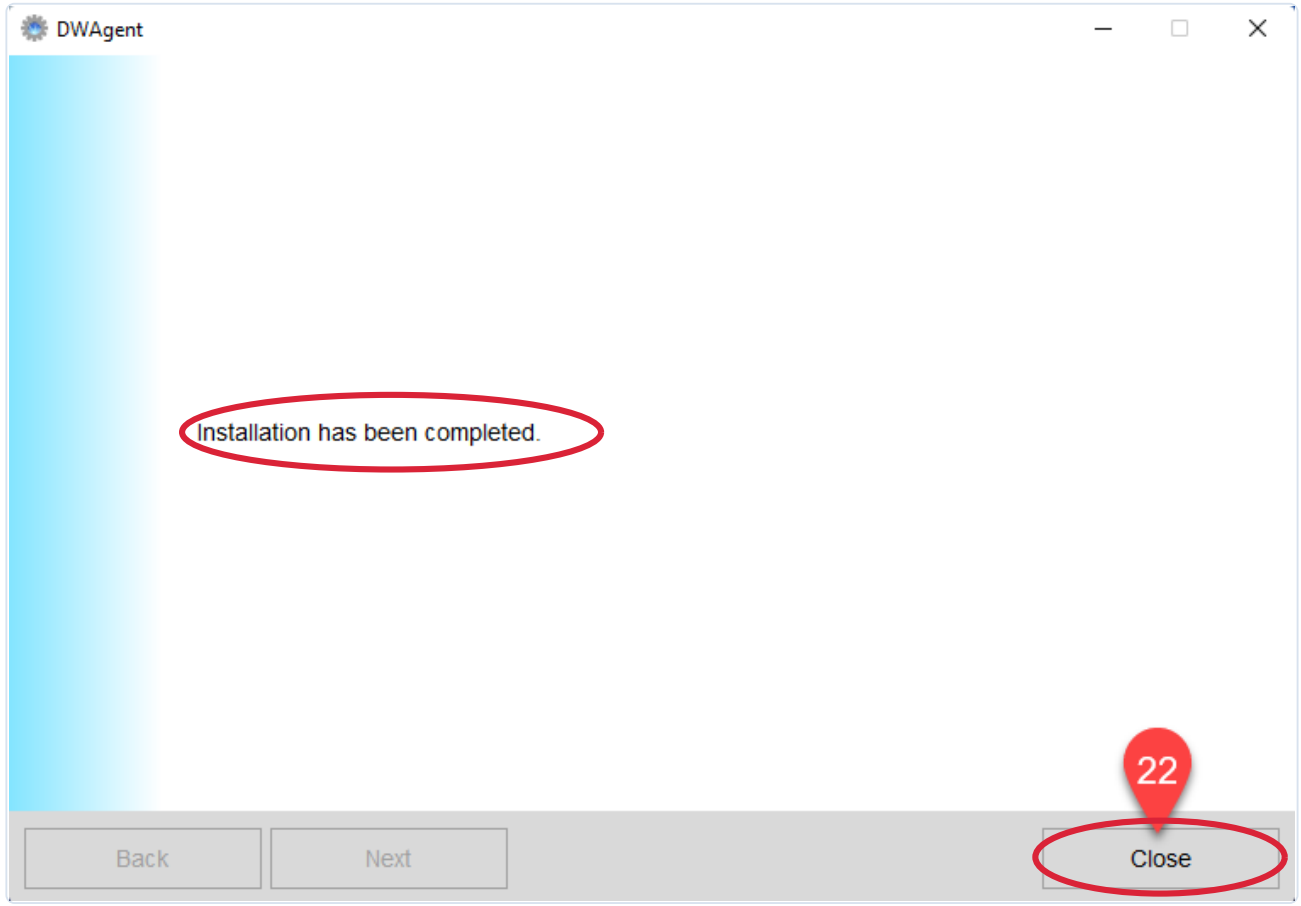

10 Wait for completion and click Close

Wait until you see **Installation has been completed.**
Some versions may say **Installation completed**.

Click **Close** at the bottom right.

The installation is finished. Continue to the next page to check the connection.

Closing this installer leaves DWAgent installed and available for remote support when enabled and online.

Source: official DWService Windows guide. Original arrows retained.

Check the connection

11 Open DWAgent and check Online

Click the **DWAgent icon** near the Windows clock to open **DWAgent - Monitor**.

Check that the status is **Online** and that your agent name is shown.

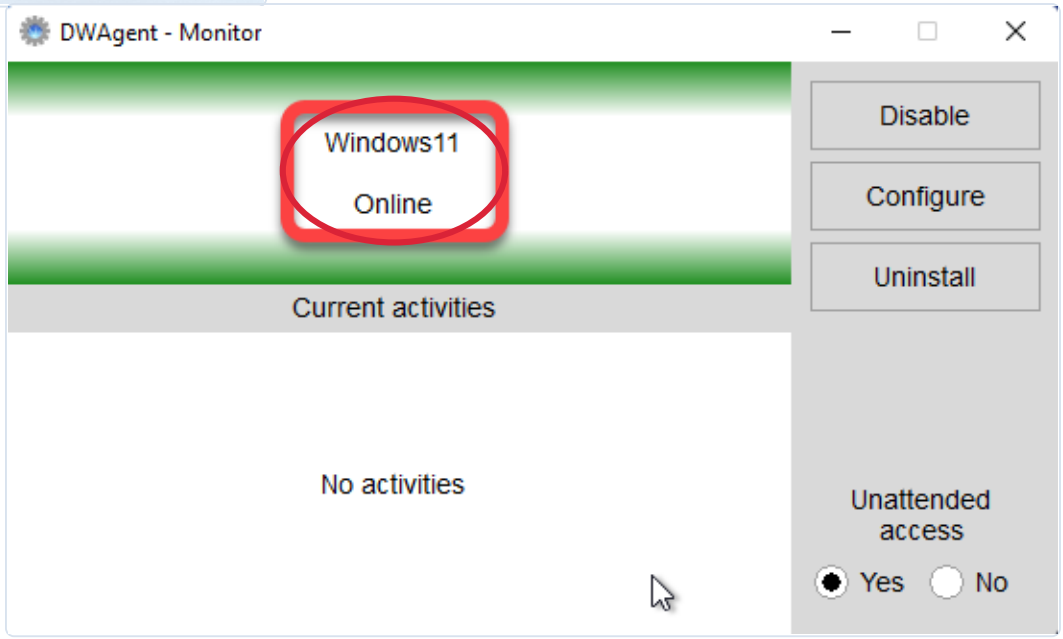

Tell Postiqo Support that installation is complete and give them the agent name you entered.

The sample name **Windows11** belongs to the official screenshot. Your computer should show your own agent name. If it stays Offline, check your internet connection and contact support.

Open the tray icon

If the icon is hidden, click the small upward arrow by the clock first.

Source: official DWService Windows guide. Example agent name shown.

Your access controls

Pause or remove remote support access

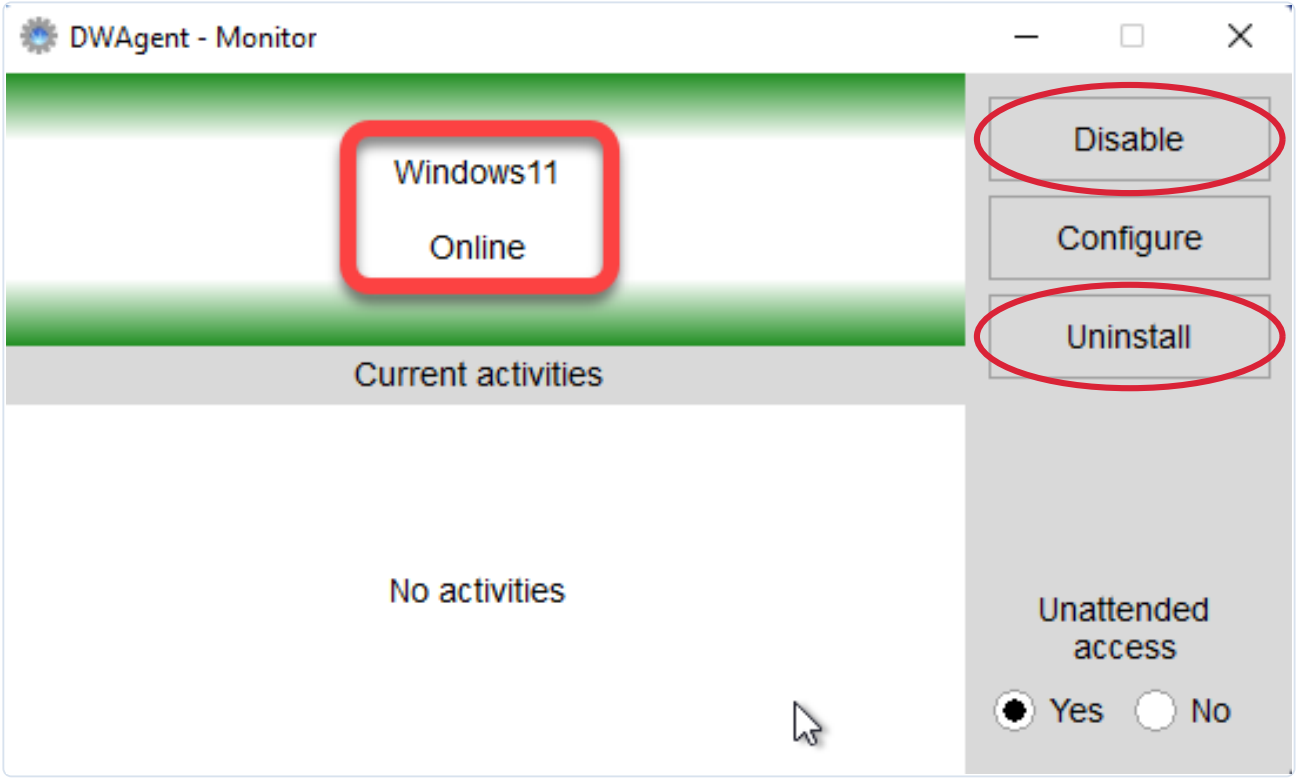

Open **DWAgent - Monitor** using the tray icon shown on page 12.

A Pause access
Click **Disable** and follow any confirmation. Check that the status changes to **Disabled**.

B Revoke access on this computer
Click **Uninstall** and follow the removal prompts. Ask your administrator for help if needed.

Tell Postiqo Support if you want the computer removed from their support records too.

Choose A or B as needed. Closing the monitor window does not stop access. Disconnecting the internet interrupts remote connections temporarily, but access may return when the computer reconnects.

Official DWService help: Disable / remove the agent. Follow any prompts on your computer.
